

runtime_error

```
classDiagram
    class runtime_error
    class Bomb_BombException["Bomb::BombException"] {
        + BombException()
        + BombException()
    }
    Bomb_BombException --|> runtime_error
```

The diagram illustrates an inheritance relationship. At the top is a class box for 'runtime_error' with two empty compartments. Below it is a class box for 'Bomb::BombException' with a header compartment and two content compartments. The bottom content compartment lists two public methods: '+ BombException()' and '+ BombException()'. A blue arrow with an open triangle head points from the 'Bomb::BombException' box to the 'runtime_error' box, indicating that 'Bomb::BombException' inherits from 'runtime_error'.

Bomb::BombException

+ BombException()
+ BombException()
